

Jenkins Pipeline for MyMavenSelenium02

Step 1: Open the Jenkins Dashboard in order to create a new item

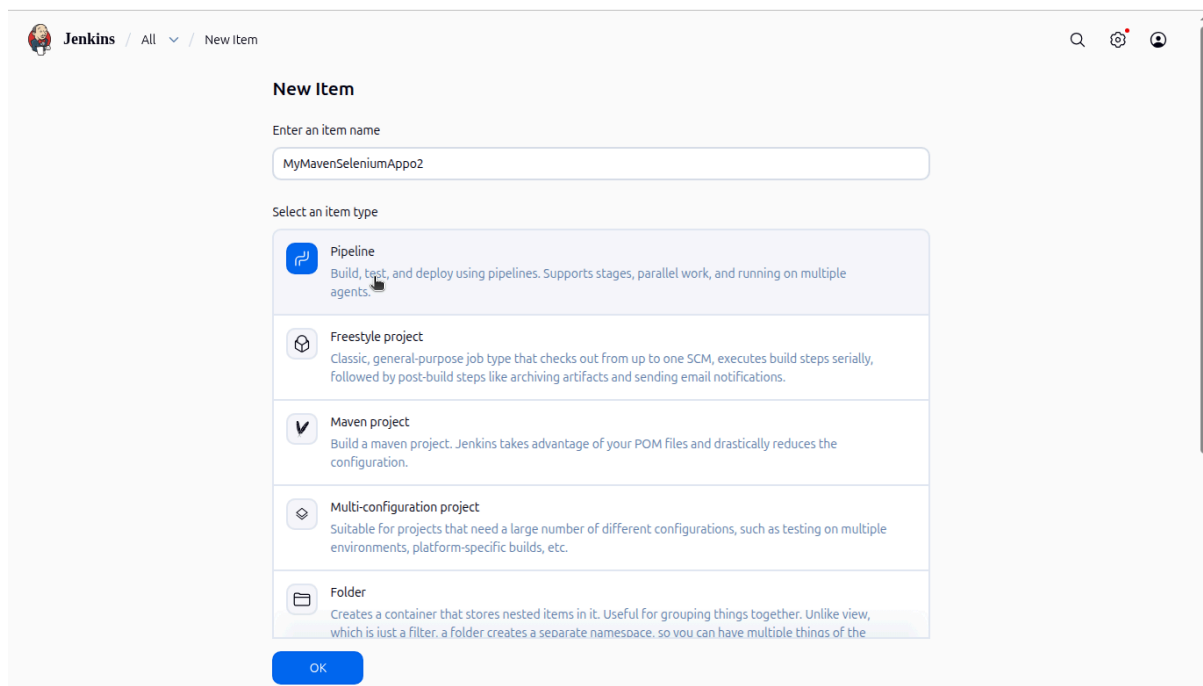

The screenshot shows the Jenkins Dashboard. On the left, there's a sidebar with navigation links: "New Item", "Build History", "Project Relationship", and "Check File Fingerprint". Below these are two sections: "Build Queue" (showing "No builds in the queue.") and "Build Executor Status" (showing "0/2"). The main area displays a table of build items. The table has columns for status (S), icon (W), name, last success, last failure, last duration, and a play button. The items listed are:

S	W	Name	Last Success	Last Failure	Last Duration
✗	☁	MavenAnsibleWebApp1	N/A	15 hr #1	12 sec
✓	☁	MyGradleApp	3 hr 25 min #4	1 day 9 hr #1	13 sec
✓	☁	MyMavenGuavaApp	3 hr 24 min #6	8 hr 32 min #4	11 sec
✓	☀	MyMavenPipelineApp	3 hr 25 min #3	N/A	13 sec
✓	☀	MyMavenSeleniumApp01	8 hr 52 min #3	N/A	8.5 sec
✓	☀	MyMavenSeleniumApp02	8 hr 54 min #3	N/A	8.7 sec
✓	☀	MyMavenSeleniumApp03	8 hr 50 min #2	N/A	8.6 sec
✗	☁	MyMavenSeleniumApp04	N/A	10 min #8	34 sec

Step 2: Click on New Item in order for creating an New Item and thus give the name as “MyMavenAppSelenium02” and Item type as Pipeline and

Create it

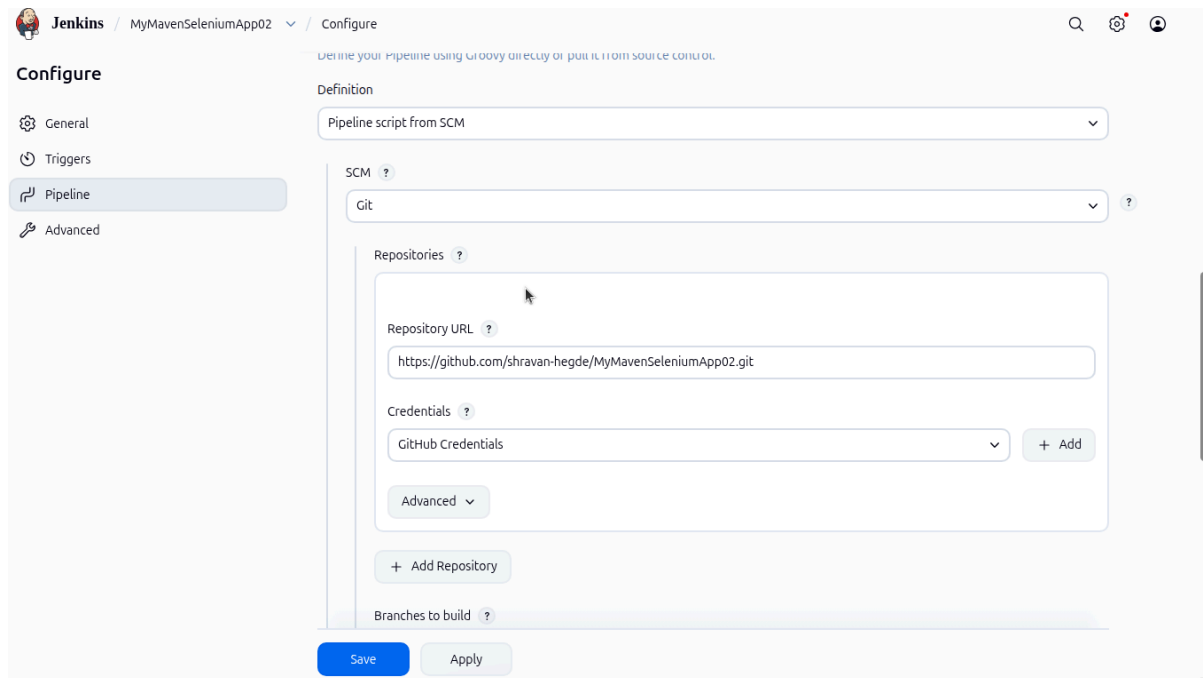

The screenshot shows the "New Item" form in Jenkins. The breadcrumb navigation at the top is "Jenkins / All / New Item". The form has two main sections:

- Enter an item name:** A text input field containing "MyMavenSeleniumApp02".
- Select an item type:** A list of options with icons and descriptions:
 - Pipeline:** Build, test, and deploy using pipelines. Supports stages, parallel work, and running on multiple agents. (This option is selected with a checkmark.)
 - Freestyle project:** Classic, general-purpose job type that checks out from up to one SCM, executes build steps serially, followed by post-build steps like archiving artifacts and sending email notifications.
 - Maven project:** Build a maven project. Jenkins takes advantage of your POM files and drastically reduces the configuration.
 - Multi-configuration project:** Suitable for projects that need a large number of different configurations, such as testing on multiple environments, platform-specific builds, etc.
 - Folder:** Creates a container that stores nested items in it. Useful for grouping things together. Unlike view, which is just a filter, a folder creates a separate namespace, so you can have multiple things of the

At the bottom of the form is a blue "OK" button.

Step 3: To configure the pipeline, set the Definition to Pipeline script from SCM, choose Git as your SCM, and provide your Repository URL along with the GitHub Credentials you previously established.

The screenshot shows the Jenkins 'Configure' page for a job named 'MyMavenSeleniumApp02'. The left sidebar has tabs for 'General', 'Triggers', 'Pipeline', and 'Advanced', with 'Pipeline' selected. The main area shows the 'Definition' dropdown set to 'Pipeline script from SCM'. Below this, the 'SCM' dropdown is set to 'Git'. The 'Repositories' section contains a 'Repository URL' field with the value 'https://github.com/shravan-hegde/MyMavenSeleniumApp02.git', a 'Credentials' dropdown set to 'GitHub Credentials', and an 'Add' button. There is also an 'Advanced' dropdown and an '+ Add Repository' button. At the bottom, there is a 'Branches to build' field and 'Save' and 'Apply' buttons.

Step 4: Now in Terminal, go to directory created for MyMavenAppSelenium02 and create an new file called “Jenkinsfile”

```
shravan-hegde@shravan-hegde-QEMU-Virtual-Machine:~/Devops$ cd MyMavenSeleniumApp02/
shravan-hegde@shravan-hegde-QEMU-Virtual-Machine:~/Devops/MyMavenSeleniumApp02$ tree
.
├── pom.xml
├── src
│   ├── main
│   │   └── java
│   │       ├── com
│   │       └── example
│   │           └── App.java
├── target
│   ├── classes
│   │   ├── com
│   │   └── example
│   │       └── App.class
│   ├── generated-sources
│   │   └── annotations
│   ├── maven-archiver
│   │   └── pom.properties
│   ├── maven-status
│   │   ├── maven-compiler-plugin
│   │   └── compile
│   │       └── default-compile

│   │           └── inputFiles.lst
└── MyMavenSeleniumApp02-1.0-SNAPSHOT.jar

17 directories, 7 files
shravan-hegde@shravan-hegde-QEMU-Virtual-Machine:~/Devops/MyMavenSeleniumApp02$ gedit Jenkinsfile
```

Step 5: Paste the code inside the Jenkinsfile

```
1 pipeline {
2   agent any
3
4   tools {
5     maven 'Maven'
6   }
7
8   stages {
9
10    stage('Checkout') {
11      steps {
12        git branch: 'main', url: 'https://github.com/shravan-hegde/MyMavenSeleniumApp02.git'
13      }
14    }
15
16    stage('Build') {
17      steps {
18        sh 'mvn clean install'
19      }
20    }
21
22    stage('Test') {
23      steps {
24        sh 'mvn test'
25      }
26    }
27  }
28
29  post {
30    success {
31      echo 'Build successful!'
```

Step 6: Now we need to Push changes to the github.

The screenshot displays the GitHub interface for the repository 'MyMavenSeleniumApp02' by user 'shravan-hegde'. The repository is public and has 0 stars, 0 forks, and 0 watchers. The main content area shows a file list for the 'main' branch, including 'src/main/java/com/example', 'target', 'jenkinsfile', and 'pom.xml'. A 'README' section is visible with a prompt to 'Add a README'. The sidebar on the right contains sections for 'About', 'Releases', 'Packages', and 'Contributors'.

File	Commit Message	Time
src/main/java/com/example	Practice Test Selenium Automation Project	last month
target	Practice Test Selenium Automation Project	last month
jenkinsfile	Update Jenkinsfile	9 hours ago
pom.xml	Practice Test Selenium Automation Project	last month
